

ATTENTION: ACUCAM OWNERS!

In September, 2009, Hitachi decided to discontinue manufacturing printer film and parts. We began receiving calls from Acucam owners all over the country asking what could be done to prolong the life of this product.

We have created two solutions:

1- Keep everything you have now, and just replace the printer with one manufactured by Sony. It will be a simple unplug and plug, and you are back in business. A footpedal or hand-held remote and 4 boxes of 50 print film are included. As it is in current production, Sony is required to keep all after market products available for 7 years after the end of production. This is a federal law, and Hitachi had honored it almost to the day. Your cost is \$1,850.00 plus shipping.

2- A plug and play high powered DELL computer including a 19" flat panel monitor for easy patient viewing, a digital footpedal, mouse and keyboard. It is completely configured and ready for you to start taking pictures with your Acucam. It comes pre-loaded with Apteryx software, universally regarded as the best technology software in dentistry. This software has a bridge built in to connect with your Windows based practice management software. There is nothing additional you need from your practice management software company for this bridge to work. Everything is numbered for easy connection and a simple 20 minute phone training is included. You can print to your office printer over the network, or purchase one of a number of inexpensive photo size printers available for this application. I like this solution best because it offers you the opportunity for expansion, and to take advantage of the benefits of the digital environment. Your cost is \$3,495.00 plus shipping.

D.T.S. has been servicing and supplying the intraoral camera industry for 14 years. We work primarily on the Acucam and the Vipercam (successor to the Acucam-almost as good) due to the fact that they were the two best cameras ever built, and well worth the investment to keep in service. We are in the USB intraoral camera business as well, and we sell the best one made. It pales in comparison to the Acucam image in the digital environment!

Due to the incredible image quality generated by the Acucam, it is highly sought after on the secondary market for this application. We occasionally have refurbished Acucams for sale. They are completely restored prior to sale, include a 6 month parts and labor warranty, and are very rare. Call for availability and pricing.

D.T.S. will continue to provide service and supplies for your Acucam and Vipercam.
